DEPARTMENT OF BASIC SCIENCE AND HUMANITIES

VMTW/BSH/AOC/2017-18/II/01

Date: 20-12-2017

CIRCULAR

This is to inform all the I B.Tech ECE & EEE students that, the Department is organizing an Add on course on "Statistical Data Analysis Using MS Excel-Basic". Department advisory committee has been identified Mr. K. SANTHOSH KUMAR, Assistant Professor, BSH for the course. He will be available 6 days to complete the course, which will take place from 27-12-2017 to 04-01-2018. The participating students will be honored with certificates of participation. During the course you will be encouraged to interact with the speaker and the other participants through the case study discussions, hence those who are interested fill the registration form.

About the Department:

Department of CSE, VMTW has started B.Tech in Computer Science and Engineering in the year 2008 with an intake of 90. The scholarly ambiance in CSE Department is encouraging to the complete development of the students with well-equipped labs. Department has dedicated and professionally well competent faculty and the many of the faculty are pursuing Ph.D. in emerging areas like Artificial Intelligence, Machine Learning, Cyber Security, Data Science and Block Chain. The main objective is to prepare the students to be successful in Computer Science Engineer to meet the industry needs, encourage lifelong skills and strengthen research.

About the Course :

In this practical course, we are going to focus on how to perform advanced statistical calculations and data analysis using Microsoft Excel.

Excel is a very used tool in several companies and has very powerful data analysis capabilities that can be used by data analysts and marketing experts. Even if you work with a lot of statistics you'd be surprised at how valuable Excel is for calculating hypothesis tests and the most common metrics you can calculate on a dataset. There are several basic and advanced functions you can use to get the best from your data and that's why Excel is a very useful tool for anybody who needs to crunch data and perform analyses of various kinds

The course will also guide you about Pivot tables and about their use in Data Analytics. The final phase of this course will cover Data Visualization, in which you will be able to learn how to represent data using pictorial charts and tables. Using various examples, the instructor has beautifully explained Data Visualization in the course. Attend a quiz after completing the course that lets you test your knowledge and claim your course certificate once you pass the quiz

Course Objectives:

- To learn to organize data interactively using tables while sorting, filtering and performing calculations on their contents.
- To learn to perform data calculations using basic arithmetic formulas, main categories built-in functions and arrays.
- To learn Descriptive Statistics with the help of simple but practical examples.

Expected Outcomes:

At the end of the course, students will have the ability to:

- Knowledge about SPSS and its operations, representing data diagrammatically and graphically using MS-EXCEL and SPSS.
- Ability to compute absolute and relative measures of central tendency and dispersion, correlation and regression analysis using MS-EXCEL and SPSS.
- Knowledge about concepts related to hypothesis, computation of large sample tests using MS-EXCEL and SPSS.
- Ability to identify and compute small sample tests, Chi-square tests using MS-EXCEL and SPSS.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Academic Year: 2017-18

Date: 20-12-2017

ADD ON COURSE SYLLABUS: Statistical Data Analysis Using MS Excel-Basic

B.Tech I-II SEM

VENUE: A- BLOCK SEMINAR HALL

SECTION: ECE-A&B

COURSE OBJECTIVES:

- To visualize data using conditional formatting and various visualization tools.
- To learn to organize data interactively using tables while sorting, filtering and performing calculations on their contents.
- To learn to perform data calculations using basic arithmetic formulas, main categories built-in functions and arrays.
- To learn Descriptive Statistics with the help of simple but practical examples
- Perform basic spreadsheet tasks including navigation, data entry, and using formulas

Module I

Excel Introduction, Interface, Basic Navigation and Editing, Cell Formatting, Number Formatting, Editing, Viewing, Spreadsheet structure, table and its formatting, conditional formatting, adding list, Cell references, Named Ranges, Design, Customizing Excel, Housekeeping.

Module II:

Connecting Workbooks, Documentation, Protecting and Sharing, Googledocs, Excel troubleshooting, adding Graphics to Spreadsheets, Page and Print Setup

.Module III:

Introduction to various functions such as logical functions, date and time functions, VLookup/ Hlookup function, etc. and data processing, Dashboard preparations.

Module IV:

Data Visualizations: Bar graph, Histogram, Line chart, Gantt chart, box plot frequency curves and frequency polygon using excel add-ins like Analysis tool pack, etc. Formatting graphs viz. layout, color, labels, using picture in column chart, etc.

PRINCIPAL

Vignan's Institute of Management & Technology For Women

PROGRAM REPORT

Name of the Add on Course: Statistical Data Analysis Using MS Excel-Basic

Day/Duration: 6 Days/ 36 Hours

Time: 9AM to 4PM

Resource Person: Mr. K. SANTHOSH KUMAR, Assistant Professor, Dept. of BSH, VMTW, Hyderabad

Name of the Coordinator: K. Ashok Reddy, Assistant Professor Dept. of ECE VMTW, Hyderabad

Number of the Participants: 118

Topics covered: The following topics covered in this program

1. Basic Navigation and Editing, Cell Formatting, Number Formatting
2. Protecting and Sharing, Google docs, Excel troubleshooting
3. VLOOKUP / Hlookup function, etc. and data processing
4. Formatting graphs viz. layout, color, labels
5. Waterfall chart changing its layout, gradient fill, Scatter and bubble chart

Course Outcomes:

COs	At the end of the course, students will have the ability to:	POs Mapped	Strength of mapping
CO1	Gain the knowledge about SPSS and its operations, representing data	PO2,PO3	2
CO2	Gain Knowledge about concepts related to hypothesis, computation of large sample tests	PO3,PO4	3
CO3	Learn the compute absolute and relative measures of central tendency	PO3,PO4	2
CO4	Learn the compute small sample tests, Chi-square tests using MS-EXCEL	PO2,PO4	2
CO5	Become aware of Data visualization: Waterfall chart changing its layout	PO2,PO4	3

Assessment Procedure: The assessment of the Add on course is conducted in Multiple Choice Questions through offline Mode.

Summary:

Department of ECE has organized add on course on Statistical Data Analysis Using MS Excel-Basic” for the year 2017-18, was provided to I BTech students from 27-12-2017 to 04-01-2018. The course will also guide you about Pivot tables and about their use in Data Analytics. The final phase of this course will cover Data Visualization, in which you will be able to learn how to represent data using pictorial charts and tables. Using various examples, the instructor has beautifully explained Data Visualization in the course; we offered the course as an add-on to the I year students. The program was coordinated by K. Ashok Reddy, Assistant Professor Dept. of ECE and conducted Mr. K. SANTHOSH KUMAR, Assistant Professor, BSH, VMTW. The classes in their scheduled time between 9am to 4pm in weekdays. 118 students registered and out of which 115 students did complete their course successfully completing the end course examination and all were issued certificates.

About the Department:

Department of CSE, VMTW has started B. Tech in Computer Science and Engineering in the year 2008 with an intake of 90. The scholarly ambiance in CSE Department is encouraging to the complete development of the students with well-equipped labs. Department has dedicated and professionally well competent faculty and the many of the faculty are pursuing Ph.D. in emerging areas like Artificial Intelligence, Machine Learning, Cyber Security, Data Science and Block Chain. The main objective is to prepare the students to be successful in Computer Science Engineer to meet the industry needs, encourage lifelong skills and strengthen research.

Course Modules:

Module 1: A brief history of LINUX, architecture of LINUX, features of LINUX, introduction to vi editor. Linux commands- PATH, man, echo, printf, script, passwd, uname, who, ls, cp, mv.

Module 2: Linux Session, Standard Streams, Redirection, Pipes, Tee Command, Command Execution.

Module 3: Introduction to UNIX file system, inode (Index Node), file descriptors, system calls and device drivers.

Module 4: Process, process identifiers, process structure: process table, viewing processes, system processes, process scheduling, starting new processes.

Module 5: Pipe, process pipes, the pipe call, parent and child processes, and named pipes: fifos, semaphores: semget, semop, semctl, message queues.

Course Objectives:

1. To learn principles of operating system including File handling utilities.
2. To familiarize fundamentals of the Bourne again shell (bash), shell programming.
3. To understand file concepts kernel support for file.
4. To learn Inter process communication.
5. To understand semaphore and shared memory.

Expected Outcomes:

At the end of the course, students will have the ability to:

- Understand the basic commands of linux operating system and can write shell scripts.
- Create file systems and directories and operate them.
- Create processes background and fore ground etc..by fork() system calls.
- Create shared memory segments, pipes, message queues and can exercise interprocess communication.
- Understand the concepts of process, threads and file structure.

About the Course:

The concept, of course, is this project is to develop a home automation system using an Arduino board with Bluetooth to be remotely controlled by any Android OS smartphone. As technology is advancing so houses are also getting smarter. Modern houses gradually shift from conventional switches to centralized control systems, involving remote-controlled switches. Presently, conventional wall switches in different parts of the house make it difficult for the user to go near them to operate. Even more, it becomes more difficult for the elderly or physically handicapped people to do so. The remote-controlled home automation system provides a most modern solution with smartphones. In order to achieve this, a Bluetooth module is interfaced to the Arduino board at the receiver end while on the transmitter end, a GUI application on the cell phone sends ON/OFF commands to the receiver where loads are connected. By touching the specified location on the GUI, the loads can be turned ON/OFF remotely through this technology. The loads are operated by Arduino board through optoisolators and thyristors using triacs.

Course Objectives:

- Automation
- Remote Control
- Integration and Customization

- Energy Monitoring and Conservation
- Learning and Experimentation

Expected Outcomes:

At the end of Workshop, participants will be able to

- Automation
- Remote Control
- Energy efficiency
- Safety enhancements
- Data logging and analysis
- Integration with other systems

SECTION: ECE-A

COURSE OBJECTIVES:

1. To study the various linear models.
2. Understand the basic classifiers.
3. To learn basic electronic concepts, breadboard and electronic components, and writing lab reports.
4. To learn how the Arduino platform works in terms of the physical board and libraries and the IDE
5. Learn to build your own led circuit

Module I: Introduction to embedded systems

Introduction to embedded systems •– Components of embedded system, Advantages and applications of embedded systems, Different Microcontroller Architectures (CISC, RISC, ARISC)

Module II: Electronic Components

Internal Resources & Hardware Chips in Details, History of AVR Microcontrollers and Features, Memory Architectures (RAM/ROM), Learning Arduino Platform, and Introduction to ARDUINO, ARDUINO History and Family.

Module III Programming in Embedded-C

Programming in Embedded-C, Concepts of C language, General Hardware Interfacings, Introduction to sensors and actuators, How to connect and work with different sensors, such as Humidity, Proximity, IR Motion, Accelerometer, Sound, Light Distance, Pressure, Thermal etc to ARDUINO Board, Reading various sensor data on serial monitor and LCD Display, Functioning of actuator

Module IV Computational Devices

Reading data from analog and digital sensors on Serial Monitor/LCD Monitor., Work with LED Controlled by Switch/potentiometer, 7 segment displays, How to connect relays and servomotors to

Kondapur (V), Ghatkesar (M), Medchal-Malkajgiri (Dt)-501301
Telangana State

ARDUINO Board., Work with 5V/3V Power supply using voltage regulator IC'S., Project Based on embedded system design using Arduino board

Module V ARDUINO based home automation

ARDUINO based home automation, ARDUINO Based Alarm Clock, ARDUINO Based Car Parking System, etc, Arduino Integrated Development Environment Software, ARDUINO Development Board With ATmega8 Microcontroller, How to connect relays and servomotors to ARDUINO Board, Project Based on embedded system design using Arduino board.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Date: 30-09-2017

PROGRAM REPORT

Name of the Add on Course: Controlling of Electrical appliances through Arduino

Day/Duration: 35 Hours

Time: 4pm to 5pm

Resource Person: Mr. K. JAGADESHWAR REDDY, Sr. Engineer in Elegant Embedded Solutions Pvt. Ltd. Hyderabad

Name of the Coordinator: Mr. M .Karthikpal, Assistant Professor Dept. of ECE, VMTW, Hyderabad

Number of the Participants: 4

Topics covered: The following topics covered in this program

1. Different Microcontroller Architectures
2. Integration with other systems
3. Connect relays and servomotors to ARDUINO Board
4. Connect and work with different sensors
5. Home automation system using an Arduino

Course Outcomes:

COs	At the end of the course, students will have the ability to:	Pos Mapped	Strength of mapping
CO1	Learn the basics of electronics, including reading schematics (electronics diagrams).	PO1,PO2	2
CO2	Learn how to prototype circuits with a breadboard	PO3,PO4	3
CO3	Learn the Arduino programming language and IDE.	PO3,PO4	3
CO4	Program basic Arduino examples	PO2,PO5	2
CO5	Recognize the functionality of micro controller, latest version processors and its applications	PO3,PO4	3

Assessment Procedure: The assessment of the Add on course is conducted in Multiple Choice Questions through offline Mode.

Summary:

Department of ECE has organized add on course on “Controlling of Electrical appliances through Arduino” for the year 2017-18, was provided to IV BTech students from 21-08-2017 to 28-09-2017. The goal of this course is to introduce you to what an Arduino is how it works, and how to use it for great projects. It is a course that provides an understanding of electrical engineering fundamentals, as well as the basics of programming and building circuits for the Arduino. The program was coordinated by Mr. M .Karthikpal, Assistant Professor Dept. of ECE and conducted by Mr. K. JAGADESHWAR REDDY, Sr. Engineer in Elegant Embedded Solutions Pvt. Ltd. Hyderabad. The classes in their scheduled time between 4pm to 5pm. 4 students registered and successfully and all students did complete their course successfully completing the end course examination and all were issued certificates.

CIRCULAR

This is to inform all the III B. Tech ECE students that there will be an Add on course on “**Latest trends in chip design for Area and Power Optimization**” in association with AMTRONICS PVT LTD. Hyderabad, from 18-08-2017 to 27-09-2017. All students are invited to take part in this course. The participating students will be honored with certificates of participation. During the course you will be encouraged to interact with the speaker and the other participants through the case study discussions.

About the Department:

Department of Electronics and Communication Engineering was started since the inception of Vignan's Institute of Management and Technology for Women during 2008 with an initial intake of 90. The strength was enhanced to 120 during 2010. The Department had added Post graduate programme in VLSI during the year 2011 and Embedded Systems during 2014 with an intake of 18 each.

The Department has state-of-art laboratories equipped with advanced and well maintained equipment, continuously updated application software packages, more than adequate computing systems with 24x7, 30 MBPS internet facility.

About the Course:

VLSI Stands for Very-large-scale integration (VLSI), which creates an integrated circuit (IC) by combining millions of MOS (Metal Oxide Silicon transistor) transistors over a single chip. The microprocessor and memory chips are VLSI (Very-large-scale integration) devices. Before the intro of VLSI technology, most ICs had a limited set of roles they could perform. IC (Integrated Circuits) are used in various types of electronic devices. Our mobile phone consists of IC. IC is a circuit where all or some of the circuit elements are inseparably linked and electrically interconnected, so it's considered indivisible for construction and commerce. Before VLSI, IC size used to be much larger than it is now. Because of VLSI, designers can now add millions of transistors and other components on a tiny chip.

Course Objectives:

- Overview of IC Design
- Aspects of IC Design
- Introduction and Device Characteristics
- Analog IC Design
- Digital IC Design
- Semicustom IC Design/PLD
- Introduction to cadence EDA
- Op Amp Design and Compensation
- VLSI Signal Processing
- VLSI Communication System Design

- Fixed Signal Design/RF IC Design
- FDGA/VHDL

Expected Outcomes:

At the end of Workshop, participants will be able to

- Model digital systems in VHDL and SystemC at different levels of abstraction.
- Partition a digital system into different subsystems.
- Simulate and verify a design.
- Transfer a design from a version possible to simulate to a version possible to synthesize.
- Use computer-aided design tools to synthesize, map, place, routing, and download the digital designs on the FPGA board.
- Apply knowledge of mathematics, science, and engineering to design and analysis of analog integrated circuits.
- Identify, formulate, and solve engineering problems in the area of analog integrated circuits.
- Use the techniques, skills, and modern programming tools such as Mentor Graphics, necessary for engineering practice.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Academic Year: 2017-18

Date: 14-08-2017

ADD ON COURSE SYLLABUS: Latest trends in chip design for Area and Power Optimization

B.Tech III-I SEM VENUE: B: BLOCK SEMINAR HALL SECTION: ECE-A&B

COURSE OBJECTIVES:

1. To introduce the students to the design principles of Digital VLSI Circuits.
2. To enable the students to solve theoretical and practical problems related to Digital VLSI Circuits.
3. To enable the students to efficiently analyze and design circuits for Digital VLSI Domain..
4. To get exposed to the various architectural features of CPLDS and FPGAS
5. To equip the students with domain specific industry standard CAD tools

Module I: Introduction to VLSI

Full-Voltage Scaling, Constant-Voltage Scaling, MOSFET Capacitances, Geometric Scaling Theory, Properties of MOSFETs, Challenges of MOSFET Scaling.

Module II: CMOS Logic Circuits

Layout of CMOS Logic Circuits: CMOS fabrication processing steps, Layout of logic circuits, Switching Properties of MOSFETs, Static and dynamic characteristics of Pass Transistors, CMOS Inverter: Basic Circuit and DC Operation.

Module III: CMOS Logic Elements

CMOS Inverter: Basic Circuit and DC Operation, DC Characteristics, Noise Margins, Layout, considerations, Inverter Switching Characteristics, Transient Effects on the VTC, Static CMOS Logic Elements: CMOS NAND Gate, CMOS NOR Gate, Complex Logic Functions, EDA tools, architecture design and test optimization with system integration issues, Overview of SOC Design Process.

Module IV: ASIC Design flow and EDA tools

Techniques to improve a specific design metric, ASIC Design flow and EDA tools, CMOS Inverter: Basic Circuit and DC Operation, DC Characteristics, , Layout, Platforms and SoC Design, Function Architecture Co-design, Designing Communication Networks.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Date: 29-09-2017

PROGRAM REPORT

Name of the Add on Course: Latest trends in chip design for Area and Power Optimization

Day/Duration: 35 Hours

Time: 4pm to 5pm

Resource Person: Mr. ARJUN MODI, Technical Manager in AMTRONICS, Hyderabad

Name of the Coordinator: G. Narendra, Assistant Professor Dept. of ECE VMTW, Hyderabad

Number of the Participants: 71

Topics covered: The following topics covered in this program

1. Challenges of MOSFET Scaling
2. CMOS fabrication Processing Steps
3. Static CMOS Logic Elements
4. ASIC Design flow and EDA tools
5. Design methodologies for SoC

Course Outcomes:

COs	At the end of the course, students will have the ability to:	Pos Mapped	Strength of mapping
CO1	Gain the knowledge about MOSFET / CMOS operation and CMOS process flow.	PO2,PO3	2
CO2	Gain the knowledge of transistor sizing, logical effort and combinational logic	PO3,PO4	3
CO3	Learn the design concepts with sequential logic.	PO3,PO4	2
CO4	Learn the issues related with the static timing analysis and clock distribution.	PO2,PO4	2
CO5	Become aware of concepts of memory design and interconnect delay	PO2,PO4	3

Assessment Procedure: The assessment of the Add on course is conducted in Multiple Choice Questions through online mode.

Summary:

Department of ECE has organized add on course on “: Latest trends in chip design for Area and Power Optimization” for the year 2017-18, was provided to III B.Tech students from 18-08-2017 to 27-09-2017. The scope of design and verification includes various stages, such as design entry, simulation, synthesis, physical design, and verification. As the complexity of VLSI chips continues to increase, the demand for skilled engineers with expertise in VLSI design and verification is expected to grow in the future, we offered the course as an add-on to the III year students. The program was coordinated by G. Narendra, Assistant Professor Dept. of ECE and conducted by Mr. ARJUN MODI, Technical Manager in AMTRONICS, Hyderabad. The classes in their scheduled time between 4pm to 5pm in weekdays. 71 students registered and out of which 67 students did complete their course successfully completing the end course examination and all were issued certificates.

This is to inform all the II B. Tech ECE students that, the Department organizing an Add on course on "Fundamentals of Engineering Applications through Mat Lab". Department advisory committee has been identified Mr. P. Harikrishna, Assistant Professor in ECE Dept. for the course. He has an efficient and fine knowledge about that add on course, hence he will available 35 days to complete the course, which will take place from 17-08-2017 to 29-09-2017. The participating students will be honored with certificates of participation. During the course you will be encouraged to interact with the speaker and the other participants through the case study discussions.

About the Course:

Now a days programming knowledge has become very essential for engineering professionals as well as scientists and researchers to develop simulation models, performing analysis, optimization & decision making. Knowledge of using modeling packages like AutoCAD, Pro/E, SolidWorks, CATIA, MS-Excel etc. is not sufficient. Engineering professionals, scientists and researchers are also expected to know, how to control the package by programming and customizing it as per the requirement. Many times data exchange between different software packages has become necessity to utilize expertise of different software packages and requires a neutral software tool like MATLAB/SCILAB to take the input from software, perform computations and output the results to another software package. MATLAB and SCILAB are excellent tools for visualization and manipulation of engineering data as well as performing various engineering computations. Software modules can also be developed using GUI of MATLAB. It also provides various tool boxes to perform specialized computations.

Course Objectives:

It is hands-on experience-oriented programming skill development program with exhaustive application specific programming exercises. Course will be beneficial to beginners of MATLAB/SCILAB as well as practitioners of different domain. Teaching methodology will be adopted in such a manner so that all can cope up even those who do not possess any prior knowledge of programming. Apart from three days of workshop, one day pre-workshop will also be organized for those who don't have prior knowledge of MATLAB/SCILAB, on January 09, 2014. Case studies of advanced application of MATLAB will be presented by highly motivated researchers/faculty and will demonstrate their recent research work. Course content will cover basic introduction to MATLAB/SCILAB, use of various commands, logical operators, functions, arrays, loops etc. printing, plotting visualization using

MATLAB, data input/output in various format, generating executable files and stand-alone applications, building Graphical user interface (GUI), introduction to Simulink etc., with exhaustive sample programs and exercises.

Expected Outcomes:

- Work with use of various commands.
- Work with programs with the use of Operators, functions, arrays, loops, plotting
- Generating Executable files and stand-alone applications.
- Building Graphical user interface (GUI)
- Introduction to Simulink
- Working with simulink in MATLAB

Academic Year: 2017-18

Date: 14-08-2017

ADD ON COURSE SYLLABUS: Fundamentals of Engineering Applications through Mat Lab

B.Tech II-I SEM

VENUE: B: BLOCK SEMINAR HALL

SECTION: ECE-A&B

COURSE OBJECTIVES:

1. Understanding the MATLAB environment
2. Being able to do simple calculations using MATLAB
3. Being able to carry out simple numerical computations and analyses using MATLAB
4. To Solve, Simulate and Analyse basic Electrical and Electronics Circuits and Applications
5. To develop hands on working experience with reference to Solve, Simulate and Analyse Electrical & Electronics Circuits using MATLAB

Module I: MATLAB Basics

The MATLAB Environment •-- Creating Variables, Some Useful MATLAB Functions Operations with Variables, Standard MatLab windows, MatLab as {best} calculator. • Naming, Arrays – Checking

Module II: Operations with Variables

Arrays • Column and rows: creation and indexing - Matrix- Arrays- Size and length, Multiplication, Division, Writing script files

Module III Logical variables and operators

Files and File Management – Import/Export • Basic 2D, 3D plots • Graphic handling- Numbers- Strings

Module IV Data and data flow in MATLAB

Conditional Statements, Loops • MATLAB Programs – Programming and Debugging. • Applications of MATLAB Programming- Data import- Data output- Plotting- Graphics

Module V Modifying properties of graphics objects

Algebraic equations • Basic Symbolic Calculus and Differential equations • Numerical Techniques and Transforms- GNU Octave- Simulink

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Date: 30-09-2017

PROGRAM REPORT

Name of the Add on Course: Fundamentals of Engineering Applications through MATLAB

Day/Duration: 35 Hours

Time: 4 pm to 5pm

Resource Person: Mr. P. Harikrishna, Assistant Professor Dept. of ECE, VMTW Hyderabad

Name of the Coordinator: Dr. M.Rakesh, Associate professor Dept. of ECE, VMTW Hyderabad

Number of the Participants: 79

Topics covered: The following topics covered in this program

1. Knowledge of MATLAB
2. Advanced application of MATLAB
3. Design simple algorithms to solve problems
4. Vectors and matrices in MATLAB
5. MATLAB graphic functions

Course Outcomes:

COs	At the end of the course, students will have the ability to:	Pos Mapped	Strength of mapping
CO1	Understand the main features of the MATLAB development environment	PO2,PO3	2
CO2	Understand the fundamentals of sampling including the implications of sampling theorem.	PO3,PO4	3
CO3	Analyze the signals with different transform technique	PO2,PO3	4
CO4	Apply the concepts of convolution and correlation for continuous time signals	PO3,PO4	4
CO5	Solve, Simulate and Analyse various Analog and Digital Electronics circuits.	PO3,PO4	3

Assessment Procedure: The assessment of the Add on course is conducted in Multiple Choice Questions through offline Mode.

Summary:

Department of ECE has organized add on course on “Fundamentals of Engineering Applications through MATLAB” for the year 2017-18, was provided to II B Tech students from 17-08-2017 to 29-09-2017. MATLAB is a programming course that allows manipulation, implementation and functioning of data, algorithms and user interfaces used for various applications. MATLAB is a very high performing language used for technical computing. The program was coordinated by Dr. M.Rakesh, Associate professor Dept. of ECE and conducted by Mr. P. Harikrishna, Assistant Professor Dept. of ECE, VMTW. The classes in their scheduled time between 4pm to 5pm. 79 students registered and successfully out of which 73 students did complete their course successfully completing the end course examination and all were issued certificates.

About the Department:

Department of CSE, VMTW has started B.Tech in Computer Science and Engineering in the year 2008 with an intake of 90. The scholarly ambiance in CSE Department is encouraging to the complete development of the students with well-equipped labs. Department has dedicated and professionally well competent faculty and the many of the faculty are pursuing Ph.D. in emerging areas like Artificial Intelligence, Machine Learning, Cyber Security, Data Science and Block Chain. The main objective is to prepare the students to be successful in Computer Science Engineer to meet the industry needs, encourage lifelong skills and strengthen research.

About the Course:

In this course, you will learn about applications of Machine Learning in different fields such as health care, banking, telecommunication, and so on. You'll get a general overview of Machine Learning topics such as supervised vs unsupervised learning, and the usage of each algorithm. Also, you understand the advantage of using Python libraries for implementing Machine Learning models. The course covers the fundamentals of Python and its use in the context of data science and machine learning. It also covers the basics of supervised and unsupervised learning, and helps students gain a strong understanding of the principles of data science and machine learning. The course provides hands-on experience and code examples to help learners understand complex concepts and apply them in a practical setting.

Course Objectives:

In this module, you will get a brief intro to regression. You learn about Linear, Non-linear, Simple and Multiple regression, and their applications. In the lab part, you apply all these methods to two different datasets. Also, you learn how to evaluate your regression model and calculate its accuracy. you will also learn about clustering specifically k-means clustering and how the k-means

clustering algorithm works and how to use k-means clustering for customer segmentation. With this course, learners can gain a deep understanding of the Python programming language and its potential applications in data science and machine learning.

Expected Outcomes:

Understand basic classification techniques. You practice with different classification algorithms, such as KNN, Decision Trees, Logistic Regression and SVM. Also, you learn about pros and cons of each method and different classification accuracy metrics. Evaluate the performance of various machine learning algorithms on various data sets of a domain. Design and Concrete implementations of various machine learning algorithms to solve a given problem using languages such as Python. The tools and program paradigms of AI. Apply intelligent agents for Artificial Intelligence programming techniques. Applying problem-solving through the search for AI applications and logic and reasoning techniques to AI applications.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Addon Course Syllabus

Addon Course: Machine Learning Using Python

Course Objectives:

1. To appreciate the breadth & depth of ML applications and use cases in real-world scenarios.
2. To Import and wrangle data using Python libraries and divide them into training and test datasets
3. To Understand Data preprocessing techniques, Univariate and Multivariate analysis, Missing values and outlier treatment etc
4. To Implement linear and polynomial regression, understand Ridge and lasso Regression,
5. To Implement various type of classification methods including SVM, Naive bayes, decision tree, and random forest

Module 1: Python Installation with various IDE's , Python data Types, Control Structures, Functions ,Introduction of OOP's.

Module 2: Data Analysis & visualization –using numpy, panda matplotlib, scipy.

Module 3: Introduction to machine learning. Supervised machine learning, Unsupervised machine learnings.

Module 4: Study of various machine learning algorithms including Classification, Regression, , KNN, K Means, Logistic Regression, Support Vector Machines (SVM), Decision Tree, Naïve Bayes, Ensemble Methods, Random Forest.

About the Course:

In this course, we are going to share information about web applications programmed in Java Servlet. It includes all about Web server, configuration instructions and sending Email implementation and demonstration of execution with examples. It will be a complete course on Java Servlet along with technical interview tips and preparation with some sample questions for beginners and professionals. Here is an approach or technology as a combination of technologies that one can follow for a simple web application who is having a basic knowledge of core Java and a bit of knowledge of advanced Java working with the database. In order to create a project one must be clear about the two ends, this includes frontend and backend.

Course Objectives:

The build strong web application based on Java like Servlet, JSP, EJB, Struts Framework, and many more. Explore the differences between web services, APIs, and microservices. Develop REST and GraphQL APIs, and learn how to secure, consume, document, and test those APIs and web services. In order to create a Java web-based project with which the knowledge is up to programming language then you can follow the simple flow explained below while creating a project being a beginner. The first step geek in order to create such web development projects requires knowledge about the web technologies carried forward to other frameworks. There are many ways to create such Java web projects, where there are many frameworks spring, maven, hibernate, etc depending on the requirement of the project.

Expected Outcomes:

Understand basic Build applications that read and write to relational databases using both the Java Persistence API (JPA) and SQL. Using standard design patterns to make your persistence layer easy to test and integrate with a Spring Boot application. For the frontend or UI (User

Interface) one can either opt for swing or JSP. Here taking JSP for the illustration part out of swing and JSP which stands for Java Server Pages. The input from users can be collected through the forms of a webpage by using JSP and the records from the database system are able to appear in the form of view respectively. In order to retrieve the information containing data from the database system, the available tags of JSP are used and these tags are used for different related functionalities like going from one page to another and similarly for other means as well.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Addon Course Syllabus

Addon Course : Java for web development

Course Objectives:

1. To understand the concepts of HyperText Markup Language and Cascading Style Sheets.
2. To learn JavaScript for creating dynamic websites.
3. To learn the operations perform on data among web applications using XML
4. To acquire knowledge on creation of software components using JAVA Beans
5. To acquire knowledge of MVC Architecture

Module 1: Web Application Overview, Java EE 6 Platform, Architecture, Web Servers, Java Web Technologies.

Module 2: JSF Overview, Facelets, Facelet Tag Libraries, JSF Expression Language (EL), JSF Framework, UI Components, MVC Framework, Managed Beans, JSF Life Cycle, Converters and Validators, Page Navigation, Event Handling.

Module 3: Working with JSF, Ajax with JSF, Page Navigation, Implicit Navigation, Explicit Navigation. Action Event Handlers.

Module 4: Anatomy of a JSF Web App, JSF Managed Beans, Annotations, Bean Scopes, Property Bindings and EL, MVC Support.

Addon course Report

Addon course for the III-year I sem B.Tech. students on **Java for web development** was organized. Here are the summary facts.

Day/Duration: 11-12-2017 to 16-12-2017 6(Days) - 36Hrs

Time: 09:00am to 03:30pm

Name of the Coordinator: Mrs.P.Prathima, Assistant Professor, Dept of CSE, VMTW.

Number of the Participants: 92

Topics covered: The following topics covered in this program

- ❖ Web Application Overview, Java EE 6 Platform, Architecture, Web Servers, Java Web Technologies.
- ❖ JSF Overview, Facelets, Facelet Tag Libraries, JSF Expression Language (EL), JSF Framework, UI Components, Working with JSF, Ajax with JSF, Page Navigation, Implicit Navigation, Explicit Navigation, Action Event Handlers.
- ❖ Anatomy of a JSF Web App, JSF Managed Beans, Annotations, Bean Scopes, Property Bindings and EL, MVC Support.

Course Outcomes:

COs	At the end of the course, students will have the ability to:	Pos Mapped	Strength of mapping
CO1	Implement web based applications using features of HTML and XML	PO3,PO4	3
CO2	Develop reusable component for Graphical User Interface applications	PO3	4
CO3	Apply the concepts of server side technologies for dynamic web applications	PO1,PO2	4
CO4	Implement the web based applications using effective data base access with rich client interaction	PO3,PO4	2
CO5	Develop JavaScript applications that transition between states.	PO3	4

About the Course:

In this course, the focus is able to create web applications using PHP and My SQL, understand the concepts of client and server, get hands-on experience of how things happen in PHP, and get in depth learning of My SQL relational database management system. that includes in-depth understanding of PHP and My SQL in order to create websites and apps that match the exacting standards of today's business enterprises. You will know how to seamlessly work between the web interface and the back-end and connect them for stellar results. You will also learn advanced PHP concepts and My SQL databases. The various functions in PHP including the in-built and user-defined ones, learning about the Regular Expressions, File Inclusion, working with Quantifiers, Modifiers, learning to deploy various Regular Expressions in PHP like preg_filter, preg_match, preg_split, understanding Escape Sequences. PHP and MySQL are incredibly powerful open source technologies that allow programmers and web developers to create functional websites and apps that go way beyond basic HTML.

Course Objectives:

In this module, they will learn about state management in PHP [SESSIONS & COOKIES] and they will learn how to connect PHP web application with My SQL database. Create PHP scripts using multiple files, Display and handle HTML forms within a single PHP script, Create and call functions, and Create functions that take arguments and return values. And Set and alter the variable scope, Send email from a PHP script. Choose column types and other column properties, create databases and tables, insert records, select, update and delete data, and Use conditionals and functions. They are familiar with the foundational information required to build a sample content management site through PHP interactions using a database. PHP is specially created to generate interactive and dynamic websites and is also known as server-side scripting language while MySQL is one of the

leading relational databases along with Oracle and Microsoft SQL Server. This is a project-based course and there is a lot of practice exercises.

Expected Outcomes:

This course will understand that it is an all-in-one solution that helps you to learn how to create a web application using PHP and MySQL, all at one place. This course is a complete mixture of multiple technologies like HTML, CSS, JavaScript, JQuery, Bootstrap and AJAX along with PHP and MySQL. They will be able to send and receive data to and from database. In this course, we will go step by step to build a complete custom MVC (Model View Controller) framework Called TraversyMVC using object-oriented PHP. We will build something similar to Codeigniter but much much lighter. You'll explore Hypertext Markup Language (HTML), as well as the basic syntax and data structures of the PHP language, variables, logic, iteration, arrays, error handling, and global variables, among other elements. The course will teach you step by step how to do create the project and the knowledge you have learned in the course will help you to grasp the material and complete the task at your hand.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

ADDON COURSE SYLLABUS

ADDON COURSE: Web Designing using HTML/PHP/MY SQL

Course objectives:

1. To introduce the fundamentals of Internet, and the principles of web design.
2. To construct basic websites using HTML and Cascading Style Sheets.
3. To build dynamic web pages with validation using Java Script objects and by applying different event handling mechanisms.
4. To develop modern interactive web applications using PHP, XML and MySQL.
5. To Understand the Concepts of Database.

Module 1: Introduction to Web, Web applications Introduction to Database and its types. The PHP programming environment, Overview of SQL. WAMP/MAMP.

Module 2: Installing Apache, PHP and MySQL on your computer Testing on a remote Server Deciding on Development tools Using PHP MyAdmin.

Module 3: Setting up a PHP page The phpinfo() function Learning basic syntax Echoing HTML output to the browser The importance of comments Using single and double quotes/ Comments

Module 4: Making calculations Using built-in numeric functions Incrementing and decrementing. Arithmetic operators Logical operators Comparisons Operator precedence.

Module 5: Writing SQL queries Using Select, Insert, Update and Delete Querying MySQL and returning results Interpreting the returned array. Creating pages to: Add entries.

About the Course:

In this course, You will learn about the Fundamentals of Hadoop and YARN and write applications using them HDFS, MapReduce, Hive, Pig, , Work with Avro data formats, Practicing real-life projects using Hadoop and Apache Spark. Hadoop is an open-source framework that allows for the distributed processing of large data sets across clusters of computers using simple programming models. Hive, a data warehouse software, provides an SQL-like interface to efficiently query and manipulate large data sets residing in various databases and file systems that integrate with Hadoop.

Course Objectives:

Big Data is the fastest growing and the most promising technology for handling large volumes of data for doing data analytics. This Big Data course will help you be up and running in the most demanding professional skills. Almost all top MNCs are trying to get into Big Data Hadoop; hence, there is a huge demand for certified Big Data professionals. Big Data Hadoop Training Courses are proposed to give you all around learning of the Big Data framework using Hadoop and Spark, including YARN, HDFS and MapReduce. You will be able to learn how to use Pig, Hive, and Impala to practice and examine tremendous datasets stored in the HDFS, and use Sqoop and Flume for data ingestion. You will expert consistent data processing of using Spark, consolidating valuable programming in Spark, understanding parallel processing in Spark, completing Spark applications and using Spark RDD streamlining approaches. Moreover, you will learn various instinctive figurings in Spark and use Spark SQL for making, changing, and addressing data shapes. Big Data Training in Noida will empower you to learn the concepts of the Hadoop structure and its deployment in a cluster environment.

Expected Outcomes:

This Course will help you to understand Big Data that

upgrade your career in the Big Data domain. you will learn about the characteristics of Big Data and its application in Big Data Analytics. You will gain an understanding of the features, benefits, limitations, and applications of some of the Big Data processing tools. You'll explore how Hadoop and Hive help leverage the benefits of Big Data while overcoming some of the challenges it poses. You will discover how to leverage Spark to deliver reliable insights. The course provides an overview of the platform, going into the different components that make up Apache Spark. And you'll gain a fundamental understanding of the Apache Hadoop architecture, ecosystem, practices, and commonly used applications including Distributed File System (HDFS), MapReduce, HIVE and HBase. Gain practical skills in this module's lab when you launch a single-node Hadoop cluster using Docker and run MapReduce jobs.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Addon course syllabus

Addon course: Hadoop and Spark

Course objectives:

1. To understand Hadoop Fundamentals
2. To gain understanding Hadoop Distributed File System (HDFS)
3. To gain understanding of the Map Reduce paradigm
4. To gain understanding of the Hadoop ecosystem
5. To gain understanding of the Apache Spark Cluster Models

Module 1: Introduction to the Hadoop Ecosystem, MapReduce, HDFS, Hive, HBase, and Spark, other modules.

Module 2: Apache Spark, Functional Programming Basics, Parallel Programming using Resilient Distributed Datasets, Scale-out / Data Parallelism in Apache Spark, DataFrames and SparkSQL,

Module 3: Introduction to Data-Frames & SparkSQL, RDDs in Parallel Programming and Spark, Data-frames and Datasets, Catalyst and Tungsten.

Module 4: Apache Spark architecture, Overview of Apache Spark Cluster Modes, Apache Spark User Interface, Setting Apache Spark Configuration.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Date: 12-03-2018

ADDON COURSE REPORT

Name of the Add on Course: Hadoop and Spark

Day/Duration: 05-03-2018 to 10-03-2018 6(Days) - 36Hrs

Name of the Coordinator: Mr.Jagadeeshwar Reddy, Assistant Professor, Dept of CSE.

Number of the Participants: 12

Topics covered: The following topics covered in this program

- ❖ Hadoop Ecosystem, MapReduce, HDFS, Hive, HBase, and Spark, other modules.
- ❖ Apache Spark, Functional Programming Basics, Parallel Programming using Resilient Distributed Datasets, Scale-out / Data Parallelism in Apache Spark, DataFrames and SparkSQL.
- ❖ SparkSQL, RDDs in Parallel Programming and Spark, Data-frames and Datasets, Catalyst and Tungsten.
- ❖ Overview of Apache Spark Cluster Modes, Apache Spark.

Course Outcomes:

COs	At the end of the course, students will have the ability to:	Pos Mapped	Strength of mapping
CO1	Understand Big Data characteristics the Hadoop ecosystem.	PO1,PO2	3
CO2	Develop and test MapReduce applications	PO4,PO5	3
CO3	Use MapReduce combiners, partitioners, and the distributed cache	PO2	3
CO4	Integrate other tools with Hadoop such as Apache Pig, Apache Hive	PO5	4
CO5	Learn how to navigate the Hadoop ecosystem and understand how to optimize its use.	PO1	4

VMTW/CSE/AOC/2017-2018/II/03

24-01-2018

CIRCULAR

This is to inform all the III-II B. Tech CSE students that there will be an Add on course on "Artificial intelligence and Intelligent systems " from 29/1/2018 to 2/2/2018. All students are invited to take part in this course. The participating students will be honored with certificates of participation. During the course you will be encouraged to interact with the speaker and the other participants through the case study discussions. Hence those who are interested can sign in registration form.

About the Course:

In this course you will focus on the ideal characteristic of artificial intelligence is its ability to rationalize and take actions that have the best chance of achieving a specific goal. A subset of artificial intelligence is machine learning (ML), which refers to the concept that computer programs can automatically learn from and adapt to new data without being assisted by humans. Deep learning techniques enable this automatic learning through the absorption of huge amounts of unstructured data such as text, images, or video. One is to understand natural intelligence by the use of computer models. The other provides techniques and technology for building systems capable of intelligent decisions and actions. Thus AI is both a science and an engineering discipline. Applications of AI range from 'smart' controllers for household devices to computers that can converse in English, play games, conduct intelligent web searches or act as the brain of a robot. This can include visual perception, decision-making, translation, and even speech recognition.

Course Objectives:

The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence. Emphasis will be placed on the teaching of these fundamentals, not on providing mastery of specific software tools or programming environments. Assigned projects promote a 'hands-on' approach to understanding, as well as a challenging avenue for exploration and creativity. Artificial intelligence is a wide-ranging intelligence demonstrated by the ability of smart machines that are capable of performing tasks that typically require human intelligence. Artificial Intelligence is designed to help students to build intelligent machines, computer software, or applications with a mix of machine learning. Become familiar with basic principles of AI toward problem-solving, inference, perception, knowledge representation, and learning. Investigate applications of AI techniques in intelligent

agents, expert systems, artificial neural networks and other machine learning models. Experience AI development tools such as an 'AI language', expert system shell, and/or data mining tool.

Expected Outcomes:

The students will gain deep understanding of the basic artificial intelligence techniques. They can explain and compare theory, principles, applications, strengths and weaknesses of methods presented in the course. They will Apply difficult real-life problems in a state space representation so as to solve them using AI techniques like searching and game playing. Demonstrate and enrich knowledge to select and apply AI tools to synthesize information and develop models within the constraints of the application area. Formulate valid solutions for problems involving uncertain inputs or outcomes by using decision-making techniques. They Examine the issues involved in knowledge bases, reasoning systems and planning.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

ADDON COURSE SYLLABUS

ADDON COURSE: Artificial Intelligence and Intelligent systems

Course Objectives:

1. To impart knowledge about Artificial Intelligence.
2. To give understanding of the main abstractions and reasoning for intelligent systems.
3. To enable the students to understand the basic principles of Artificial Intelligence in various applications.
4. To impart knowledge about Natural Language Processing
5. To Understand the Concepts of Classifier

Module 1: Overview of AI problems, AI problems as NP, NP-Complete and NP Hard problems. Strong and weak, neat and scruffy, symbolic and sub-symbolic, knowledge-based and data-driven AI.

Module 2: Search Strategies: Problem spaces (states, goals and operators), problem solving by search, Heuristics and informed search, Minmax Search, Alpha-beta pruning. Constraint satisfaction (backtracking and local search methods).

Module 3: Knowledge representation and reasoning: propositional and predicate logic, Resolution and theorem proving, Temporal and spatial reasoning. Probabilistic reasoning, Bayes theorem.

Module 4: Learning in problem solving, Classification, Inductive learning, Naive Bayesian Classifier, decision trees. Natural Language Processing: Language models, n-grams, Vector space models, Bag of words, Text classification. Information retrieval.

Text Books

1. Artificial Intelligence : Building Intelligent Systems, Kulkarni, Parag, Joshi, Prachi, Print Book ISBN : 9788120350465.
2. Artificial Intelligence : Principles And Applications Chandra S.S., Vinod Hareendran S.Anand Edition : Second Edition, Print Book ISBN : 9789389347838.

Addon course Report

Name of the Add on Course: Artificial intelligence and Intelligent systems

Day/Duration: 29-01-2018 to 02-02-2018 5(Days) - 32Hrs

Time: 09:00am to 04:30pm

Name of the Coordinator: Mrs. Deepthi sri Dakuri, Assistant Professor, Dept of CSE, VMTW.

Number of the Participants: 26

Topics covered: The following topics covered in this program

- AI problems as NP, NP-Complete and NP Hard problems. Strong and weak, neat and scruffy, symbolic and sub-symbolic, knowledge-based and data-driven AI.
- Problem spaces (states, goals and operators), problem solving by search, Heuristics and informed search.
- Propositional and predicate logic, Resolution and theorem proving, Temporal and spatial reasoning, Probabilistic reasoning, Bayes theorem.
- Classification, Inductive learning, Naive Bayesian Classifier, decision trees. Natural Language Processing: Language models, n-grams, Vector space models.

Course Outcomes:

COs	At the end of the course, students will have the ability to:	Pos Mapped	Strength of mapping
CO1	Define the concept of Artificial Intelligence	PO1	3
CO2	Apply AI techniques to real-world problems to develop intelligent systems	PO2,PO3	3
CO3	Select appropriately from a range of techniques when implementing intelligent systems.	PO1	2
CO4	Solve basic AI based problems	PO2	3
CO5	Learn about artificial intelligence techniques and intelligent systems	PO1	4
