About the Course:

The concept, of course, is this project is to develop a home automation system using an Arduino board with Bluetooth to be remotely controlled by any Android OS smartphone. As technology is advancing so houses are also getting smarter. Modern houses gradually shift from conventional switches to centralized control systems, involving remote-controlled switches. Presently, conventional wall switches in different parts of the house make it difficult for the user to go near them to operate. Even more, it becomes more difficult for the elderly or physically handicapped people to do so. The remote-controlled home automation system provides a most modern solution with smartphones. In order to achieve this, a Bluetooth module is interfaced to the Arduino board at the receiver end while on the transmitter end, a GUI application on the cell phone sends ON/OFF commands to the receiver where loads are connected. By touching the specified location on the GUI, the loads can be turned ON/OFF remotely through this technology. The loads are operated by Arduino board through optoisolators and thyristors using triacs.

Course Objectives:

- Automation
- Remote Control
- Integration and Customization

- Energy Monitoring and Conservation
- Learning and Experimentation

Expected Outcomes:

At the end of Workshop, participants will be able to

- Automation
- Remote Control
- Energy efficiency
- Safety enhancements
- Data logging and analysis
- Integration with other systems

ABOUT THE INSTITUTION

Vignan's Institute of Management and Technology for Women (VMTW), is the brainchild of Dr. L. Rathaiah, Chairman, Vignan Group of Institutions, which was founded in August 2008, with four branches of Engineering.

VMTW is an exemplary institution of higher learning with a mission of pursuing excellence in education and research. The institution, with its diverse and dynamic community of about 2000 students offers a distinctive combination of some of the finest facilities for 7 different graduate, and undergraduate programs, accomplished faculty, world-class facilities with a hostel set on a sprawling area of 22 acres sylvan surroundings of mango groves and greenery.

While students at VMTW immerse themselves in academics, the college has a lot in store for them outside the classroom. Student life includes participation in sports, recreational & co-curricular, and cultural activities. In short, at VMTW students will find an academic and social environment where everyone from faculty members to peers helps shape their future.

VMTW is a home to aesthetically designed buildings with state-of-the-art computer and internet facilities, modern laboratories, workshops, seminar halls, auditoriums, and well-stocked libraries, sports, and games fields.

The Institution boasts of a strong alumni network with alumni events held every year serving as a platform for past students to give back to VMTW and share their experiences with its present fellow students. With so much to offer, it is only natural that students of VMTW get a unique opportunity to carve a niche for themselves in their chosen field of study that enables them to become well-rounded and discerning citizens, fully qualified for their chosen professions in the workplace. Institute also brings out the creativity in students by imparting engineering knowledge and honing interpersonal skills to promote innovation, research, and entrepreneurship.

ABOUT THE DEPARTMENT

Department of Electronics and Communication Engineering was started since the inception of Vignan's Institute of Management and Technology for Women during 2008 with an initial intake of 90. The strength was enhanced to 120 during 2010. The Department added Post graduate programme in VLSI during the year 2011 and Embedded Systems during 2014 with an intake of 18 each.

The Department has state-of-art laboratories equipped with advanced and well maintained equipment, continuously updated application software packages, more than adequate computing systems with 24x7, 30 MBPS internet facility.

ABOUT THE COURSE

The Internet of Things (IoT) makes available a large variety of assets (e.g., data, devices, and services) that are used in a number of ways that were once unthinkable. Similarly, foreseeing the future use of IoT assets is difficult if not impossible. The rapidly increasing number of intelligent, cloud-connected things that are embedded in our daily lives raises legitimate concerns about the privacy costs paid for the benefits these technologies provide.

COURSE OBJECTIVES

- The Internet of Things (IoT) concept has attracted a lot of attention in recent years and it is foreseen as one of the technologies that will leverage the Future Internet.
- It is seen as a major enabler of novel applications and services that will foster efficiency and will ease everyday life.
- However, current IoT solutions are mainly focusing on the development of centralized solutions that do not promote the democratization of the IoT but rather concentrate the IoT around a set of cloud-based platforms which pretend to be open but limit the capacity of the people to tailor their Personal and Communal IoT.

EXPECTED OUTCOMES

- At the end of Workshop, participants will be able to
- IoT Cloud Computing provides many connectivity options, implying large network access. People use a wide range of devices to gain access to cloud computing resources: mobile devices, tablets, and laptops. This is convenient for users but creates the problem of the need for network access points.
 - Developers can use IoT cloud computing on-demand. In other words, it is a web service accessed without special permission or any help. The only requirement is Internet access.
 - Based on the request, users can scale the service according to their needs. Fast and flexible means you can expand storage space, edit software settings, and work with the number of users. Due to this characteristic, it is possible to provide deep computing power and storage.

VMTW is an exemplary institution of higher learning with a mission of pursuing excellence in education and research. The institution, with its diverse and dynamic community of over 2000 students offers a distinctive combination of some of the finest facilities for 7 different graduate, and undergraduate programs, accomplished faculty, world-class facilities with a hostel set on a sprawling area of 22 acres sylvan surroundings of mango groves and greenery.

All students at VMTW immerse themselves in academics, as the college has a lot in store for them outside the classroom. Student life includes participation in sports, recreational & co-curricular, and cultural activities. In short, at VMTW students will find an academic and social environment where everyone from faculty members to peers helps shape their future.

VMTW is a home to aesthetically designed buildings with state-of-the-art computer and internet facilities, modern laboratories, workshops, seminar halls, auditoriums, and well-stocked libraries, sports, and games fields.

VMTW Institution boasts of a strong alumni network with annual events held every year serving as a platform for past students to give back to VMTW and share their experiences with their present fellow students. With so much to offer, it is natural that students of VMTW get a unique opportunity to carve a niche for themselves in their chosen field of study. VMTW enables them to become well-rounded and discerning professionals, fully qualified for their chosen professions in the workplace. Institute also brings out the creativity in students by imparting engineering knowledge imbuing with personal skills to promote innovation, research, and entrepreneurship.

ABOUT THE DEPARTMENT

The Department of Electronics and Communication Engineering was started since the inception of Vignan's Institute of Management and Technology for Women during 2008 with an initial intake of 90. The strength was enhanced to 120 during 2010. The Department had added Post graduate programme in VLSI during the year 2011 and Embedded Systems during 2014 with an intake of 18 each.

The Department has state-of-art laboratories equipped with advanced and well maintained equipment, continuously updated application software packages, more than adequate computing systems with 24x7, 30MBPS internet facility.

ABOUT THE COURSE

A spread spectrum communications system is one that is built upon the principle of transmitting information signals over a much wider bandwidth than is strictly necessary for transferring the information. By transmitting over a larger bandwidth, robustness against external narrowband interference is increased, since the wider the bandwidth of any transmitted signal the lower will be the relative influence of interference over a small part of the bandwidth.

COURSE OBJECTIVES

The spreading sequence may in principle be a sequence of random chips. If this is the case, then transmissions to/from different users may be assigned different random sequences.

In order to detect a sequence transmitted to or from a particular user, the total received signal, which will consist of aggregation of all users' sequences, can be correlated with the users' spreading code at the receiver side. In this case, the target user's signal will experience a combining gain across the M chips, whereas the other users' signals will not and hence appear as uncorrelated noise. This combining gain is referred to as spreading gain.

EXPECTED OUTCOMES

- At the end of Workshop, participants will be able to:
- Code Division Multiple Access (CDMA)
 - Quartz-based piezoelectric materials.
 - Direct Sequence Spread Spectrum Communications.

REPORT ON INDUSTRIAL VISIT TO ELEGANT EMBEDDED SOLUTIONS

D:30-04-2022,

TO

The H.O.D

Department of ECE,

VMTW, HYDERABAD.

Sub: Visit Report on one-day industrial visit to **ELEGANT EMBEDDED SOLUTIONS**

Respected SIR,

The visit was organized with prior permission from **ELEGANT EMBEDDED SOLUTIONS**, up on receiving the letter of permission **ELEGANT EMBEDDED SOLUTIONS**, 100 students with four faculty members myself Mr. SUNIL KUMAR and Mr. ASHOK, Mr. KARTIK went on an industrial visit to the **ELEGANT EMBEDDED SOLUTIONS** on 28-04-22. We visited all the major facilities and infrastructure of **ELEGANT EMBEDDED SOLUTIONS**. I am sure that this visit will help the students in their future Professional life and bring a positive change in their thinking and practical behavior regarding Education and especially Engineering.

We reached **ELEGANT EMBEDDED SOLUTIONS** at around 9.30 am and after several security checks and administrative formalities, we were taken to a central building.

The following technical details were given during the visit

- Home Monitoring And Alerts For The Blind PEOPLE

This project is to help the Sighted Challenged to be able to navigate and be alerted to open doors, windows status of their home and surroundings. With the Walabot talking to the Raspberry Pi

The students had an opportunity of visiting main sections of to ELEGANT EMBEDDED SOLUTIONS,AND THEY WERE INTERACTED WITH THE MD OF THE COMPANY AND THEY HAVE TAKEN SOME SUGGESTIONS.

- **Attendance Tracking using RFID**
- The project presented in this paper is designed to use a single board computer – Raspberry Pi . On powering ON the RFID reader becomes active and reads RFID UHF tags within a range of one to twelve meters Every card contains a unique number that identifies a student or any other employee of the institution. Every log of attendance is identified using the data of the real time clock. The software program stored in RPi compares the read number with similar data stored in database. If a match is found it checks whether it is the right time, day and venue the student wishes to enter and if found true the green led blinks ratifying the marking of attendance and recording the attendance to the database. Otherwise the red led blinks and a message is shown in the LCD display indicating denial of service. The push button is used to manually reset the system in the event of any error. The program checks for late arrivals and automatically denies recording of attendance. However, for valid reasons which governed and overruled by the lecturer, the system allows to enter attendance using the membrane keypad.
- Other facilities included in the software program are to send SMS message showing the percentage of absence and a reminder of the scheduled classes. In the event of a

and the Amazon Alexa, that enables the hard of sight to be able to be even more aware of their surroundings.

This project is going to be an evolving animal as I go because I am trying to integrate many different technologies into one product. Integrating the Raspi with walabot is pretty straight forward as is the Alexa .

- LED Display Using Embedded System

This project comprises a circular display of a string of LEDs. Using a high speed motor and some mechanical assembly, LED strings mounted on a printed circuit board are duly interfaced to a microcontroller. An appropriate program while executed drives a pair of single line LEDs in space multiplexing mode. This displays some message and or a clock timing taking advantage of persistence of vision of the human eye. Without the single line of LEDs in space multiplexing mode, if one would have to display a message, a number of LEDs as high as around 525 would have been used. Here the project uses only 8 LEDs. Thus material count, hardware requirement, brings the overall cost to a very affordable price. The synchronization is being implemented through software.

workshop or seminar, the system can be set with details like date, time and venue. The workshop can be associated to groups where the system allows marking of attendance only for students or lecturers of the assigned group.

ORGANIZED BY:

DEPARTMENT OF ELECTRONICS AND
COMMUNICATION ENGINEERING

ABOUT THE INSTITUTION

Vignan's Institute of Management and Technology for Women (VMTW), is the brainchild of Dr. L Rathaiah, Chairman, Vignan Group of Institutions, which was founded in August 2008, with four branches of Engineering.

VMTW is an exemplary institution of higher learning with a mission of pursuing excellence in education and research. The institution, with its diverse and dynamic community of about 2000 students offers a distinctive combination of some of the finest facilities for 7 different graduate, and undergraduate programs, accomplished faculty, world-class facilities with a hostel set on a sprawling area of 22 acres sylvan surroundings of mango groves and greenery.

While students at VMTW immerse themselves in academics, the college has a lot in store for them outside the classroom. Student life includes participation in sports, recreational & co-curricular, and cultural activities. In short, at VMTW students will find an academic and social environment where everyone from faculty members to peers helps shape their future.

VMTW is a home to aesthetically designed buildings with state-of-the-art computer and internet facilities, modern laboratories, workshops, seminar halls, auditoriums, and well-stocked libraries, sports, and games fields.

The Institution boasts of a strong alumni network with alumni events held every year serving as a platform for past students to give back to VMTW and share their experiences with its present fellow students. With so much to offer, it is only natural that students of VMTW get a unique opportunity to carve a niche for themselves in their chosen field of study that enables them to become well-rounded and discerning citizens, fully qualified for their chosen professions in the workplace. Institute also brings out the creativity in students by imparting engineering knowledge imbining interpersonal skills to promote innovation, research, and entrepreneurship.

ABOUT THE DEPARTMENT

Department of Electronics and Communication Engineering was started since the inception of Vignan's Institute of Management and Technology for Women during 2008 with an initial intake of 90. The strength was enhanced to 120 during 2010. The Department had added Post graduate programme in VLSI during the year 2011 and Embedded Systems during 2014 with an intake of 18 each.

The Department has state-of-art laboratories equipped with advanced and well maintained equipment, continuously updated application software packages, more than adequate computing systems with 24x7, 30MBPS internet facility.

ABOUT THE COURSE

The Internet of Things (IoT) makes available a large variety of assets (e.g., data, devices, and services) that are used in a number of ways that were once unthinkable. Similarly, foreseeing the future use of IoT assets is difficult if not impossible. The rapidly increasing number of intelligent, cloud-connected things that are embedded in our daily lives raises legitimate concerns about the privacy costs paid for the benefits these technologies provide.

COURSE OBJECTIVES

- The Internet of Things (IoT) concept has attracted a lot of attention in recent years and it is foreseen as one of the technologies that will leverage the Future Internet.
- It is seen as a major enabler of novel applications and services that will foster efficiency and will ease everyday life.
- However, current IoT solutions are mainly focusing on the development of centralized solutions that do not promote the democratization of the IoT but rather concentrate the IoT around a set of cloud-based platforms which pretend to be open but limit the capacity of the people to tailor their Personal and Communal IoT.

EXPECTED OUTCOMES

At the end of Workshop, participants will be able to

- IoT Cloud Computing provides many connectivity options, implying large network access. People use a wide range of devices to gain access to cloud computing resources: mobile devices, tablets, and laptops. This is convenient for users but creates the problem of the need for network access points.
- Developers can use IoT cloud computing on-demand. In other words, it is a web service accessed without special permission or any help. The only requirement is Internet access.
- Based on the request, users can scale the service according to their needs. Fast and flexible means you can expand storage space, edit software settings, and work with the number of users. Due to this characteristic, it is possible to provide deep computing power and storage.
