ABOUT THE COURSE

This course is for anyone passionate in learning how a hardware component can be adapted at runtime to better respond to users/environment needs. This adaptation can be provided by the designers, or it can be an embedded characteristic of the system itself. These runtime adaptable systems will be implemented by using FPGA technologies. Within this course we are going to provide a basic understanding on how the FPGAs are working and of the rationale behind the choice of them to implement a desired system.

COURSE OBJECTIVES

The objectives of the course are to: Learn Programmable Routing and Interconnect. Understand the various features of PSOC. Designer for configuring the digital and analog modules. Explain the the hardware and software components for mixed signal components. Learn the PSOC Hardware Components, PSoC Software Components.

EXPECTED OUTCOMES

After studying this course, students will be able to:
Explain the basic concepts and families of PSOC. Recognize the various features of PSOC architecture and programmable blocks.
Analyze the various features of PSOC Designer for configuring the digital and analog modules
Design the hardware and software components for mixed signal components. Develop the programming skills for interfacing various I/O modules to PSOC.

ABOUT THE COURSE

Introduction to IC Technology – MOS, PMOS, NMOS, CMOS & BiCMOS Basic Electrical Properties: Basic Electrical Properties of MOS and BiCMOS Circuits VLSI Circuit Design Processes: VLSI Design Flow, MOS Layers, Stick Diagrams, Design Rules and Layout, Transistors Layout Diagrams for NMOS and CMOS Inverters and Gates, Scaling of MOS circuits Gate Level Design: Logic Gates and Other complex gates, Switch logic. Data Path Subsystems Programmable Logic Devices: Design Approach – PLA, PAL, Standard Cells FPGAs, CPLDs. CMOS.

COURSE OBJECTIVES

The objectives of the course are to: Give exposure to different steps involved in the fabrication of ICs. Explain the electrical properties of MOS and BiCMOS devices to analyze the behavior of inverters designed with various loads. Give exposure to the design rules to be followed to draw the layout of any logic circuit. Provide design concepts to design building blocks of the data path of any system using gates. Understand basic programmable logic devices and testing of CMOS circuits.

EXPECTED OUTCOMES

The student will be able to. Acquire qualitative knowledge about the fabrication process of integrated circuits using MOS transistors. 2. Draw the layout of any logic circuit which helps to understand and estimate the parasitic effect of any logic circuit. Design building blocks of data path systems, memories, and simple logic circuits using PLA, PAL, FPGA, and CPLD. Understand different types of faults that can occur in a system and learn the concept of testing and adding extra hardware to improve the testability of the system

A TWO DAY WORKSHOP ON

THE INTEGRATED

CIRCUIT DESIGN

HOW DO INTEGRATED CIRCUIT

WORKS AND HOW IT IS MADE?

14TH & 15TH SEPTEMBER, 2020

VENUE:
'B'-BLOCK SEMINAR HALL, VMTW

ORGANIZED BY:
DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

ABOUT THE INSTITUTION

Vignan's Institute of Management and Technology for Women (VMTW), is the brainchild of Dr. L. Rathaiah, Chairman, Vignan Group of Institutions, which was founded in August 2008, with four branches of Engineering.

VMTW is an exemplary institution of higher learning with a mission of pursuing excellence in education and research. The institution, with its diverse and dynamic community of about 2000 students offers a distinctive combination of some of the finest facilities for 7 different graduate, and undergraduate programs, accomplished faculty, world-class facilities with a hostel set on a sprawling area of 22 acres in lush surroundings of mango groves and greenery.

While students at VMTW immerse themselves in academics, the college has a lot in store for them outside the classroom. Student life includes participation in sports, recreational & extra-curricular, and cultural activities. In short, at VMTW students will find an academic and social environment where everyone from faculty members to peers helps shape their future.

VMTW is a home to aesthetically designed buildings with state-of-the-art computer and internet facilities, modern laboratories, workshops, seminar halls, auditoriums, and well-stocked libraries, sports, and games fields.

The Institution boasts of a strong alumni network with alumni events held every year serving as a platform for past students to give back to VMTW and share their experiences with their present fellow students. With so much to offer, it is only natural that students of VMTW get a unique opportunity to carve a niche for themselves in their chosen field of study that enables them to become well-rounded and discerning professionals, fully qualified for their chosen professions in the workplace. Institute also brings out the creativity in students by imparting engineering knowledge imbuing with personal skills to promote innovation, research, and entrepreneurship.

ABOUT THE DEPARTMENT

Department of Electronics and Communication Engineering was started since the inception of Vignan's Institute of Management and Technology for Women during 2008 with an initial intake of 90. The strength was enhanced to 120 during 2010. The Department had added Post graduate programme in VLSI during the year 2011 and Embedded Systems during 2014 with an intake of 18 each.

The Department has state-of-art laboratories equipped with advanced and well maintained equipment, continuously updated application software packages, more than adequate computing systems with 24x7, 30 MBPS internet facility.

ABOUT THE COURSE

Integrated circuits revolutionized electronics and computing during the 1960s and 1970s. First, engineers were putting dozens of components on a chip in what was called Small-Scale Integration (SSI). Medium-Scale Integration (MSI) soon followed, with hundreds of components in an area of the same size. Predictably, around 1970, Large-Scale Integration (LSI) brought thousands of components, Very-Large-Scale Integration (VLSI) gave us tens of thousands, and Ultra Large Scale (ULSI) millions—and all on chips no bigger than they'd been before. In 1965, Gordon Moore of the Intel Company, a leading chipmaker, noticed that the number of components on a chip was doubling roughly every one to two years.

COURSE OBJECTIVES

Moore's Law, as this is known, has continued to hold ever since. Interviewed by The New York Times 50 years later, in 2015, Moore revealed his astonishment that the law has continued to hold: "The original prediction was to look at 10 years, which I thought was a stretch. This was going from about 60 elements on an integrated circuit to 60,000—a thousandfold extrapolation over 10 years. I thought that was pretty wild. The fact that something similar is going on for 50 years is truly amazing."

EXPECTED OUTCOMES

At the end of Workshop, participants will be able to

- How Integrated Circuit Components are Formed
- Design Process.
- Raw Materials information.
- The Manufacturing Process.

ABOUT THE INSTITUTION

Vignan's Institute of Management and Technology for Women (VMTW), is the brainchild of Dr. L. Rathaiah, Chairman, Vignan Group of Institutions, which was founded in August 2008, with four branches of Engineering.

VMTW is an exemplary institution of higher learning with a mission of pursuing excellence in education and research. The institution, with its diverse and dynamic community of about 2000 students offers a distinctive combination of some of the finest facilities for 7 different graduate, and undergraduate programs, accomplished faculty, world-class facilities with a hostel set on a sprawling area of 22 acres sylvan surroundings of mango groves and greenery.

While students at VMTW immerse themselves in academics, the college has a lot in store for them outside the classroom. Student life includes participation in sports, recreational & co-curricular, and cultural activities. In short, at VMTW students will find an academic and social environment here everyone from faculty members to peers helps shape their future.

VMTW is a home to aesthetically designed buildings with state-of-the-art computer and internet facilities, modern laboratories, workshops, seminar halls, auditoriums, and well-stocked libraries, sports, and games fields.

The Institution boasts of a strong alumni network with alumni events held every year serving as a platform for past students to give back to VMTW and share their experiences with its present fellow students. With so much to offer, it is only natural that students of VMTW get a unique opportunity to carve a niche for themselves in their chosen field of study that enables them to become well-rounded and discerning professionals, fully qualified for their chosen professions in the workplace. Institute also brings out the creativity in students by imparting engineering knowledge imbining personal skills to promote innovation, research, and entrepreneurship.

ABOUT THE DEPARTMENT

Department of Electronics and Communication Engineering was started since the inception of Vignan's Institute of Management and Technology for Women during 2008 with an initial intake of 90. The strength was enhanced to 120 during 2010. The Department had added Post graduate programme in VLSI during the year 2011 and Embedded Systems during 2014 with an intake of 18 each.

The Department has state-of-art laboratories equipped with advanced and well maintained equipment, continuously updated application software packages, more than adequate computing systems with 24x7, 30 MBPS internet facility.

ABOUT THE COURSE

In electromagnetic, a waveguide confines electromagnetic signals within the structure, preventing spreading, losses, and signal transmission from one point to another. Usually, a basic waveguide can be constructed from a hollow conducting tube. If the conducting tube has a rectangular cross-section, then it forms the rectangular waveguide. In the section below, we will discuss various aspects of rectangular waveguide theory.

COURSE OBJECTIVES

Rectangular waveguides are the most commonly used waveguides. They consist of a hollow metallic structure with a rectangular cross-section. A rectangular waveguide is usually constructed with a length of $a > b$, where b is the breadth of the rectangle. A common trend for the dimension of a rectangular waveguide is $a=2b$.

EXPECTED OUTCOMES

At the end of Workshop, participants will be able to

- Usually, a basic waveguide can be constructed from a hollow conducting tube. If the conducting tube is rectangular in shape, then it forms a rectangular waveguide.
- Rectangular waveguides are extensively used in radars, couplers, isolators, and attenuators to transmit signals.
- The electromagnetic fields corresponding to (m, n) are called TE_{mn} mode. The TE_{10} mode is the dominant waveguide in rectangular waveguides.
